(HTML) (CSS) (jQuery)

SIGNATURE PROJECTS   *2022 - Present*

Project: Web-Frontend boilerplate

Type: Structure and Configuration

Description

This project provides frontend developers with a ready-made setup that includes all the essential features needed to manage and optimize code, as well as improve the performance of the final product.

Highlight useful features

- Runtime config variable, [auto-import](#), Splitting chunks, Compression resources, ESM external resource.

- Formatter, Code-lint, Pre-commit-lint.

Project's repositories

- Vite, Vue, Typescript - [project]

- Vite, React, Typescript - [project]

- Webpack, Vue, Typescript - [project]

- Webpack, React, Typescript - [project]

(Webpack) (Vite) (ReactJS) (VueJS) (auto-import) (Husky) (Eslint) (commit-lint) (lint-staged)

Project: Web-Scraping SEO boilerplate

Type: Server Proxy

Description

This project is built on the idea of developing a website that uses completely client-side rendering, while still being SEO-friendly and compatible with search engines. There are currently products designed based on similar ideas, such as [Prerendering](#) and [Browserless](#).

Slogan: Zero waste of time, Zero waste of effort, Zero waste of money. But still get the best Lighthouse score.

Highlight useful features

- Support SEO ability for CSR frontend frameworks.

- Light-house score auto optimization.

- Support API Proxy server for caching, storing data response and rendering faster.

Project's repositories - [Demo]

- Web-scraping SEO boilerplate - Integrated with ReactJS - [project]

- Web-scraping SEO boilerplate - Integrated with VueJS - [project]

- Web-scraping SEO boilerplate - Only Server - [project]

(ExpressJS) (Fastify) (uWebsockets.js) (Puppeteer) (WorkerPool) (PM2) (html-minifier-terser)
